

The Concrete Advantage in Driveways and Sidewalks

Concrete is the best material for driveways, sidewalks and other outside flatwork. Consider these advantages:

- **Its Durable**

Concrete lasts for decades when properly installed by a professional contractor.

- **Its Low Maintenance**

Concrete pavement doesn't need resurfacing, periodic patching or frequent sealing like asphalt.

- **Its Cost Effective**

Concrete is less expensive over time because it lasts longer and requires less maintenance. Concrete also increases the resale value of your property.

- **Its Clean**

Concrete doesn't bleed messy, sticky tar to get tracked inside on carpet and tile.

- **Its Safe**

Concrete will not develop potholes or ruts that can be tripped over. Concrete has excellent light reflectance for greater nighttime security.

- **Its Attractive**

Concrete gives your property a look of quality and sophistication.

- **Its Environmentally Friendly**

Concrete doesn't contain oil and requires less energy to produce than asphalt.

- **Its Decorative**

Concrete can have the look and feel of brick, tile, slate, stone or even wood. Add color and you have a look that complements a variety of finishes and textures.

Concrete gives you more value for your money in every category!
